PROFILE SUMMARY

Driven 3rd-year Computer Science & Engineering student with a strong focus on Java Backend Development and Generative AI. Proficient in building RESTful APIs with Spring Boot and integrating Large Language Models (LLMs) into scalable applications. Dedicated to writing clean, efficient code and utilizing modern engineering practices like Git/GitHub for collaboration. Seeking to leverage backend architecture and AI engineering skills in an innovative team

PROJECTS

Generative AI

[Github Repo](#)

- Tech Stack: Python, LangChain, OpenAI, Groq LLMs, Streamlit, SQLite, MySQL.
- Developed a production-grade Generative AI framework supporting scalable text summarization and dynamic chat interfaces.
- Orchestrated complex model interactions using LangChain for efficient prompt management.
- Implemented a dual-database architecture (SQLite & MySQL) to ensure robust data persistence.
- Designed a responsive user interface using Streamlit.

Agentic AI

[Github Repo](#)

Crew Ai, OpenAi Agent SDK, Autogen

- Tech Stack: Python, AI Agents, LLMs.
- Built an Agentic AI solution capable of performing autonomous tasks based on user directives.
- Designed agent workflows to solve multi-step problems efficiently using LLM reasoning.
- Structured the codebase for modularity, ensuring easy scalability and maintenance.
